## **DETAILED ACTION**

### ***Election/Restriction***

1. Applicant's election without traverse of Group I, Claims 1- 40 in Paper No. 16 is acknowledged.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 11 - 21 and 31 - 40 are rejected under 35 U.S.C. 102(b) as being anticipated by Saito et al.

Regarding claims 1 and 21, Saito et al disclose a magnetoresistance effect element and a magnetoresistance effect sensor used in a magnetic field sensor comprising a substrate 31, 51, a ferromagnetic layer 32, a nonmagnetic layer 33, 35 and a magnetoresistive layer 34 wherein a resistance of the magnetoresistive layer changes upon an applied stress ( See Cols. 11, 12, 23 and 24, lines 36 - 49, 14 - 28, 38 - 68 and 1 - 15, See Figs. 8 and 29c ).

Regarding claims 11 and 31, the nonmagnetic conducting layer includes Ta ( See Col. 12, lines 48 - 55 ).

Regarding claims 12, 14, 32 and 34, the ferromagnetic layer includes one of

an alloy of NiFeCr and a laminated layer of CoTaZr and NiFeCr ( See Col. 12, lines 32 - 37 ).

Regarding claims 13, 15, 16, 33, 35 and 36, the magnetoresistive layer including a nickel alloy ( See Col. 12, lines 32 - 37 ).

Regarding claims 17 and 37, the thickness of each of the ferromagnetic biasing layer, the nonmagnetic conducting layer and the magneto resistive layer is within a specific range ( See Cols. 7 and 12, lines 46 - 56 and 38 - 47 ).

Regarding claims 18 - 20 and 38 - 40, an underlayer 33 is disposed between the support structure 31 and the ferromagnetic biasing layer 32, the underlayer being formed of Ta ( See Fig. 8 ).

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2 - 10 and 22 - 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saito et al in view of Saitou ( EP 0690296 ).

Regarding claims 2 - 10 and 22 - 30, Saito et al lack the support being a deformable beam and membrane and consisting of insulator layers and a conductor and having a length, thickness and width in a specific range. However, Saitou discloses a ceramic substrate 11 consisting of insulating layers 12, 13 and a conductive layer 15, the substrate having a specific length, width and thickness ( See

Pg. 4, lines 31 - 39 ). Therefore, it would be obvious to one of ordinary skill in the art at the time the invention was made of modify Saito et al according to the teachings of Saitou for the purpose of, providing a support structure that is capable of supporting plurality of layers integrally ( See Saitou, Page 2, lines 20 - 22 ).
